John,

Thank you for your comments and concerns regarding the Seattle Galvanizing Small Parts and Storage Special Use Permit. You are now considered a Party of Record for the project and your comments have been included in the Hearing Examiner staff report. The city issued a Notice of Public Hearing for the project today. You will be receiving a second email later today with that notice and if you live within 500 feet of the project property you will receive a post card notice of the hearing as well.

If you would like to attend the Public Hearing please do so, the link to the meeting is on the notice. The city website will be updated by 5:00 pm on June 19, 2024 with all the public hearing exhibits, along with the staff report. The following is the link to the website:

Subject: Proposal for hot dip galvanizing process plant

This message is from an External Sender

This message came from outside the City of Arlington

Dear Ms. Rusko:

It has been brought to my attention that a proposal for a galvanizing processing plant has been submitted, requesting approval, of said plant, located at 18520 67th Street in Arlington. If this is indeed the case, I would like to express my strong opposition to this proposal. It is my view that this is an irresponsible and dangerous project since it will affect many local residential communities and businesses, including our airport. It will also have a negative impact on apartments currently under construction across the street from the potential project site.

Since this project has the potential to emit toxic fumes into homes and businesses throughout the local area, they are a health hazard to everyone and could be debilitating, harmful and potentially deadly. As a combat veteran who still suffers from Agent Orange exposure, I am very well aware of the consequences of those effects.

I respectfully ask that this proposal be denied to ensure the long term health and safety of all the residents and businesses of Arlington.

John Swizer
