Subject: Hot Dip Galvanization Plant Proposal
Date: Monday, June 24, 2024 9:35:27 PM

This message is from an External Sender

This message came from outside the City of Arlington

To whom it may concern,

I hope this message finds you well, though I must bring a matter of significant concern to your attention. Recently, a proposal has been put forth to establish a hot dip galvanizing process plant right at the entrance of our beloved residential area, at 18520 67th Ave.

This proposal raises serious health alarms due to the nature of hot dip galvanization. The process releases toxic fumes containing lead and zinc vapors, which are known to have severe long-term health implications, including the risk of cancer and other serious illnesses. The thought of these pollutants potentially infiltrating our community is deeply troubling.

Living in such close proximity to a facility that emits these harmful substances is concerning for all of us. Our homes are meant to be safe havens, and the introduction of a chemical processing plant in our midst feels like a direct threat to our well-being.

I strongly urge you to consider the safety of your residents when making your decision for this proposal. Thank you for your time.

A concerned member of the Arlington Community and a Glen Eagle Resident,

Blake Petersen

Sincerely,
