Re: Proposed hot dip galvanizing processing plant at 18520 67th Ave

I am totally against this. It is right at the entrance of the Glen Eagle residential area. Hot dip galvanization produces toxic fumes. Inhalation of these fumes can lead to long-term health problems, as the process can cause both lead and zinc from the galvanized steel to vaporize. Exposure to lead is particularly dangerous and is known to cause numerous serious health issues, including cancer. The proximity of the proposed plant to the Glen Eagle residences is alarming. This location is unsuitable for metal chemical processing activities, especially given its placement in the heart of a residential area.
